## Basalte presents minimalist walkway light in same finishes as its switches.

Basalte introduces the Via walkway light, an interesting addition to its portfolio that is best known for its luxury line of light switches and thermostats.

This minimalist walkway light is typically installed at socket height in hallways or other rooms, to subtly illuminate the floor. It has the same form factor and high-end finishes as the Basalte switches and socket frames, and beautifully blends in any interior.

Basalte calls its new walkway light the next step in its purpose to provide a total solution for the Smart Home, creating the ultimate comfort whilst honouring the importance of a beautifully designed interior. Like all Basalte products, Via is designed and manufactured in Belgium.
