

Spotify and Tidal soon available in Basalte music server

At ISE 2018, Basalte demonstrates the complete integration of Spotify and Tidal in its S4 music server. Both services' libraries will soon be searchable in the Basalte music app, to quickly find the perfect song for any occasion in the best sound quality.

Asano is a decentralised multiroom audio system by Basalte. It brings crystal clear music in every room and directly integrates with KNX, thanks to the comprehensive S4 music server and high-performance amplifiers. This oncoming update will further complete Asano's music services and provides built-in access to millions of songs all around the house, directly controlled through the Basalte music app (for iOS, Android and web).

Spotify

Spotify will be fully integrated in S4, following the earlier link through Spotify Connect, which remains available. Because you can freely navigate the Spotify music library in the Asano Music app, you won't need the separate Spotify app anymore to play music at home!

Tidal

Tidal built its business on high fidelity music streaming in the same way that Asano boasts high-quality multiroom audio distribution. Consequently, Tidal's integration with the Basalte music server is a match made in heaven!

You can search your favourite music in the extensive library, covering more than 25 million tracks through lossless streaming. Combined with the Asano high-performance amplifiers, you enjoy music the way the artist intended, with a fully detailed and richer sound.

Experience the Basalte S4 music server and Asano multiroom audio system at the **Basalte stand 5-R120** at ISE 2018. Software update release date follows.
