smart home wonder

Basalte introduces Ellie touch panel with integrated Amazon Alexa

At Light+Building, Basalte introduces its new smart home wonder Ellie. This elegant on-wall touch panel hosts Basalte Home, the new KNX visualisation by Basalte, for easy access to lights, shades, music and more.

Typically installed in the main living areas, Ellie serves as the go-to point for all home technology controls. This includes the control of lights, shades, scenes, music, HVAC, door phones, cameras & more.

Slim design

Ellie is an on-wall touch panel with a 5.5" OLED touch screen in full HD. It's the thinnest touch panel on the market with a thickness of less than 1 cm once installed. Ellie is designed with the same finishes as the Basalte design switches & sockets, to blend seamlessly into any décor.

Full control

Ellie shows the complete Basalte Home app, originating from your Basalte Core server. This way, you have access to all controls in the room and even the entire house: by touch, but also by voice, thanks to the integration of Amazon Alexa® voice control. You can also personalise the smart home experience for each user, by adding custom restrictions for controls & functions in certain rooms.

Ellie is very easy to install in a single gang European wall box. It's low voltage powered using Power-over-Ethernet and it communicates with Basalte Core over IP.

Basalte demonstrates Ellie at Light+Building at the **Basalte stand 11.1 C06**. Contact us for a personal introduction.
