

Basalte switches to integrate natively with Crestron systems

At ISE 2017, Basalte announces that forthcoming new versions of its Sentido switch will include Cresnet® technology from Crestron®. As a result of this collaboration, Crestron® dealers will be able to seamlessly integrate the touch-sensitive switch with their systems to control lights, scenes, shades and more.

Since 2008, Basalte designs and develops products for high-end residential projects worldwide, including the popular Sentido line of touch-sensitive switches.

Handmade in Belgium, Sentido combines elegant design with high-quality materials and innovative technology. The touch-sensitive surfaces, integrated temperature sensor and unique multitouch functionalities give users intuitive control of lights, scenes, shades and more. The result is a multifunctional switch in high-grade finishes like aluminium, bronze, glass and leather.

Sentido for Cresnet® switches are manufactured and validated under the Crestron® Integrated Partner Program and will be available shortly after ISE. Contact Basalte for more information.

Basalte demonstrates Sentido, the new S4 music server and much more at the Basalte stand in hall 5 #U65 – ISE 2017.
